

DIGITAL IN-LINE HOLOGRAPHY: THEORY, SIMULATIONS AND APPLICATIONS

ROMMEL L. BARTOLOME

An undergraduate thesis submitted to the
National Institute of Physics
College of Science
University of the Philippines
Diliman, Quezon City

In partial fulfilment of the requirements for the degree of
BACHELOR OF SCIENCE IN APPLIED PHYSICS

APRIL 2013

TABLE OF CONTENTS

Table of Contents	ii
Abstract	1
I. Introduction	
1.1 Background	2
1.2 Motivation	2
1.3 Statement of the Problem	3
1.4 Objectives and Scope of the Study	3
1.5 Outline	4
II. Review of Related Literature	6
III. Principles	
3.1 Holography	11
3.2 Off-axis versus In-line Holography	
3.2.1 Off-axis Holography	12
3.2.2 In-line Holography	13
3.3 Digital In-line Holography Formulation	
3.3.1 Huygens-Fresnel Principle	15
3.3.2 Fresnel-Kirchoff versus Rayleigh-Sommerfeld Formulation	15
3.3.3 Fresnel-Kirchoff Formulation	17
IV. Methodology	
4.1 Simulations	24
4.2 Experiments	
4.2.1 Instrumentation	26

4.2.2	Objects Used	27
4.2.3	Axial Movement Measurement	27
4.2.4	Object Localization	28
V.	Results and Discussion	
5.1	Simulations	
5.1.1	Holograms	30
5.1.2	Reconstruction Distance	31
5.1.3	Background Field	33
5.1.4	Wavelength	36
5.2	Experiments	
5.2.1	Regular-shaped Objects (Glass Beads)	38
5.2.2	Irregular-shaped Objects (Lime Powder)	39
5.2.3	Biological Samples (Cheek Cells)	40
5.2.4	Axial Movement Measurement	41
5.2.5	Object Localization	43
VI.	Conclusions and Recommendations	46
	Appendix A – Simulation Program	
a.	Main Program	48
b.	Phase Simulator	49
c.	Hologram Creator	50
d.	Hologram Reconstruction	51
e.	Iteration Routine	52
	Appendix A – Reconstruction Program	54
